

PASS Permit Streamlining One Minute Introduction

- PASS is a voluntary Permit Streamlining Program developed in consensus collaboration between Code Officials and Design Professionals.
- PASS is the same across the 17 jurisdictions that currently use it, creating a regional consistency.
- Over 100 professionals are now on the PASS registry.
- PASS is open to anyone who can be the responsible party for a set of commercial plans, and it can be used for any size Tenant Improvement, or Commercial or Multifamily project.
- PASS includes:
 - A checklist that outlines document content and organization.
 - A set of consensus derived drawing examples that make up a detailed training program.
 - A test which must be passed for listing on the PASS registry.
- PASS is flexible enough to require minimum changes to normal operations for either Design Professionals or Code Officials, it does not shift any roles or responsibilities, and it saves all parties time and money.
